

ABSTRACT OF THE DISCLOSURE

A method of providing a decorative element to a window covering is disclosed. The method includes obtaining decorative element data from a user, and applying the decorative element to the window covering in a retail store. A system for providing a decorative element to a window covering in a retail location is also disclosed. The system includes a computer configured to store and recall a decorative element data file, and a printer coupled to the computer and configured to apply the selected decorative element to the window covering.
